SUMMARY

Senior frontend engineer who ships AI-powered products at scale — React/TypeScript, design systems, accessibility, and UI performance. Shipped the frontends of enterprise products used by 96 of the Fortune 100 and 3M+ users worldwide, and contributed to design systems at Smartsheet and Microsoft. Full-stack range: also builds the backends and real-time data layers those frontends run on.

TECHNICAL SKILLS

Core: React, TypeScript, JavaScript (ES6+), Redux, MobX, Next.js

Styling / Design Systems: TailwindCSS, Shadcn, Material UI, Fluent UI, SASS, CSS-in-JS, Storybook, WCAG 2.1

Testing: Jest, Vitest, Playwright, Cypress, Enzyme, Pytest

Backend / Data: Node.js, Python, FastAPI, PostgreSQL, Prisma, NoSQL, Redis

APIs & Protocols: REST, JSON, XML, YAML, CSV, WebSockets, OAuth

Cloud / Tooling: AWS, Azure DevOps, Oracle Cloud (OCI ARM64), Vercel, Cloudflare Workers, Docker, Git

AI-assisted development: Claude Code, ChatGPT Codex, GitHub Copilot, Cursor, OpenCode

EXPERIENCE

Lead Software Engineer — LiveTape.ai — *Remote | 09/2023 – Present*

- Built a real-time React/TypeScript frontend for a multi-tenant automated trading strategy platform — a visual AST builder rendering trading logic composed by prompt-engineered LLM agents, one grammar validated identically on client and server.
- Delivered live state to the browser via WebSocket fan-out, decoupling display refresh from backend execution for smooth sub-second updates under load; charted streaming data with Lightweight Charts and canvas rendering.
- Owned the full stack behind it: Python/FastAPI, PostgreSQL, Redis, deployed on OCI ARM64 behind Cloudflare.

Technical Lead & Developer — Independent Consulting — *Remote | 10/2025 – 04/2026*

- Built a SaaS marketplace UI on Next.js and TypeScript — listings, search, filters, reviews, and role-based views.
- Integrated Stripe Checkout, Billing, for one-time, subscription, invoiced payments, and vendor payouts.
- Implemented RBAC (Buyer/Seller/Admin) and an admin console for moderation and commissions, with email automation via Mailgun.

Software Engineer II — Smartsheet — *Remote | 06/2021 – 09/2023*

- Built and maintained the frontend of Smartsheet Control Center, an enterprise product used by 96 of the Fortune 100, on React, TypeScript, Redux, and Node.js.
- Contributed accessible, reusable shared components to the Lodestar design system, cutting UI development time ~20% across engineering teams — leverage other teams shipped on directly.
- Led the i18n initiative supporting 3M+ users globally; drove UI performance optimization.

Software Engineer — Microsoft (via Mindtree / Insight Global) — *Remote | 01/2020 – 05/2021*

- Owned frontend architecture modernization across Microsoft 365 Admin and Power Platform products, on React, TypeScript, and Redux/MobX.
- Built reusable components for an inner-source React design system and achieved WCAG 2.1 compliance for critical admin workflows.
- Owned a TypeScript lint migration adopted across multiple teams; translated Figma mockups into pixel-perfect, modular components.

Solutions Engineer — ConnectWise — *Bothell, WA | 06/2018 – 12/2019*

- Built custom web UI for a global CPQ SaaS platform (HTML, CSS, JavaScript, C#); held the #1 client satisfaction ranking.

EDUCATION & CERTIFICATIONS

B.S., Public Policy, University of Arizona · Azure Fundamentals (AZ-900)
